Abstract (en)

[origin: WO02058495A1] In one aspect, the invention provides a hood drawstring arrangement that may be adapted to allow a single adjustment (45) to exert tension along the vertical sides (28) of the front face opening (72) of the hood (24), which will tend to vertically compress the hood, as well as simultaneously exerting a circumferential tensioning (38) of the top portion of the hood.
