Abstract (en)  
[origin: WO02061270A1] The invention relates to a fuel injection valve (1), especially for directly injecting fuel into the combustion chamber of a mixture-compressing, spark-ignited internal combustion engine. Said injection valve comprises a nozzle body (2) that defines a housing body with an outer pole (9) and a coil housing (11), a magnet coil (10) that can be electrically excited via a line (19) and a plug contact (17), and a main fuel supply (16). The line (19) and the fuel supply (16) are commonly disposed in an adapter (18) that can be placed on an end (34) of the housing body on the supply side and can be interlinked therewith.
