Abstract (en)

[origin: FR2820828A1] The invention concerns a device for microscopic observation of at least a sample (2) such as a biological sample, arranged on a support (6), said device comprising at least a light source (42) for illuminating the sample, means (48) for reflecting said light towards the sample, a catadioptric lens (38) for observing the sample, said lens forming an image of the sample, and means (52) for acquiring said image. The reflecting means are arranged between the lens and the support.
