Abstract (en)
[origin: WO02058611A1] The invention is directed to an absorbent interlabial device. The absorbent interlabial device has a body contacting surface, a garment facing surface opposing the body contacting surface, an interior region, and a periphery region which surrounds the interior region. The body contacting surface is liquid permeable. The absorbent interlabial device comprises an absorbent member disposed between the garment facing surface and the body contacting surface. The absorbent member has a body facing surface and a garment facing surface opposing the body facing surface. The absorbent interlabial device has a convex portion on the body contacting surface in the interior region. The convex portion and the concave portion are formed in a face-to-face relationship. The invention is also directed to a method for making such an absorbent interlabial device.
