Abstract (en)
[origin: WO02064321A1] The invention relates to a hand tool machine comprising a percussor (14) and a coupling device (12, 100) that can be coupled and uncoupled to bring about and interrupt the drive connection (16, 102) of the percussor (14). According to the invention, the coupling device (12, 100) has a synchronizing device (18, 112) with a locking mechanism (20, 110) that transmits a driving torque, said mechanism having at least two corresponding locking elements (22, 24, 108) during synchronization, wherein at least one of the locking elements (22) can be moved from a locking position by the elastic force of a spring element (26, 116) during an overlatching moment.
