Abstract (en)

[origin: WO02066215A1] In order to produce a concrete part (3) that is poured into a mold, the insert (5) is arranged, at least in places, between the mold and the concrete part (3). The thickness of the insert (5) can be changed in order to create a variable gap width between the mold and the concrete part (3). In the method for mounting a concrete part (3), the mold of the concrete part (3) essentially forms the surroundings, for example, a concrete trough, and the concrete part (3) is mounted inside the mold on a bearing (6). An insert (5) is arranged inside the mold, the concrete part (3) is poured on top of the insert, and the concrete part (3) is subsequently mounted on the bearing (3).
