Abstract (en)

[origin: WO02064473A1] The invention relates to a folding blade cylinder for a folding machine, comprising a cylindrical saddle (03) and a folding blade (18) that can be regulated in various positions in said cylinder. Each position corresponds to a gap (08). The gaps (08) are separated from one another by segments (06,07) of the saddles (03). In order to move the blade from one gap (08) to the other, the folding blade (18) is retracted into the interior of the folding blade cylinder.
