Abstract (en)
[origin: FR2820757A1] The invention concerns in particular novel sequences involved in the molecular pathways of tumour suppression, tumour reversion, apoptosis and/or virus resistance. The invention also concerns the use of said sequences for treatment against cancers, viral diseases, neurodegenerative diseases and in the field of diagnosis and for implementing screening methods for assay of compounds. The invention further concerns methods for detection and/or assay of sequences of the invention or their expression products in a biological sample.
