Abstract (en)

[origin: EP1233086A1] The assembly to detect and remove foreign matter from fiber materials has fiber feeds (14, 15), and a cleaning stage (1) where a loosening roller (4) opens out the fiber material to be passed through one or more separators (5) and then into a feed channel (24). The detection/separation system (32, 33) is located directly at the transfer zone (20, 24) into the cleaning stage.
