Abstract (en)
[origin: FR2820763A1] The invention concerns a three-dimensional double-face fabric consisting of two outer layers (A, B), spaced apart and linked together by binder yarns (F), which extend substantially perpendicular to the surfaces opposite the two layers (A, B). The invention is characterised in that in some of the zones of the fabric, the binder yarns are of at least two different types, having different contraction and shrinking characteristics, said two types of binder yarns working complementarily so that they form zones with different thickness providing the fabric with a three-dimensional effect.
