Abstract (en)

[origin: WO02064993A2] The invention relates to a center fixing element (10) for a rotationally symmetrical pneumatic spring (70) for use in a vehicle, which comprises a bellows structure that is provided with center bores (57) or recesses in the area of its front sides. The fixing element is fixed on the chassis (5) and normally projects from the surroundings of the fixing point and is enclosed by the bores or recesses. The fixing element comprises a profiled pin (15) or a profiled cap (19), the maximum outer diameter of said pin or cap being at least smaller than a fifth of the maximum outer diameter of the pneumatic spring bellows structure.
