Abstract (en)

[origin: WO02065021A1] The guiding device for the end of at least one pipe which is laid in a concrete floor having an upper and a lower side is provided with a housing (12) having an upper side wall (14), a side wall (16,18) bordering thereon and a lower side (20) which is at least partially open. The lower side (20) of the housing (12) can be positioned in a horizontal manner at substantially the same height as the lower side (20) of the concrete floor (32). The guiding device is also provided with an opening (24) in the side wall (18) of the housing (12) for introducing the end (44, 46) of at least one pipe (44,46) which is laid in the concrete floor (32) into the housing (12), and at least one pipe-leadthrough projection (28) which protrudes from the upper sidewall (14) of the housing (12) in order to receive and guide the pipe through in the direction of the upper side (50) of the concrete floor (32).
