Abstract (en)

[origin: EP1193658A1] The method involves specifying, exchanging and checking sender, recipient and account identity codes in transaction and/or account management databases. The recipient identity code is sent to the cash sender, connections are established, codes and accounts are checked and the payment transaction is carried out. The method involves specifying a first identity code for the cash recipient or transfer, storing a record with the identity code and a recipient account code in a transaction database and/or a first account management database in a first server of a service provider, storing a cash sender record with an identity code or call number and an account code in a second account management database in a second server of a service provider, sending the recipient identity code to the sender, establishing connections, checking codes and accounts and conducting the payment transaction. Independent claims are also included for the following: an arrangement for transferring electronic cash amount from credit memory, a goods or service vending machine and a cash register for electronically accepting cash payments for goods or services.
