Abstract (en)

[origin: EP1361031A2] The milling head is for wall or ground milling, is fitted on an excavator arm and has at least one rotating milling tool (7) bearing a milling chisel. The milling tool has a horizontal rotation axis and next to its flange is a support console (10). The support console carries a flat plate (24) which extends at an acute angle and in a plane displaced to the tangential plane by a set milling depth. The plate ends next to the milling tool. The flat plate is stiffened and is supported on the milling head (1). A stirrup (19) is provided for adjustment of the milling depth in relation to the depth of the milling tool. The stirrup is arranged between two milling tools on the drive unit.
