Abstract (en)

[origin: EP1361317A1] Several sheet segments (1, 2) are joined at their profiled edges (3, 4) with an adhesive tape (9) in order to be folded for transport or storage. For unfolding the sheets (1, 2) are swiveled around an axle (10) formed by the edges of two adjacent sheets in combination with the tape. A second profile in the shape of a longitudinal projection (11) along one of the sheets (1) to be joined engages with a matching groove (12) located at the opposite sheet (2) covering the gap (16) and the tape (9) visible along the joint area.
