Abstract (en)

[origin: WO02065113A1] A gas sensor, based on a solid electrolyte, for measuring a gas component in a gas mixture, with at least one sensitive region is disclosed, comprising a first means for generating a reaction gas from a further gas component in the gas mixture. A second means is arranged in the sensitive region of the gas sensor, by means of which the residual content of the reaction gas can be determined after a reaction between the reactive gas and the gas component to be measured has occurred. A corresponding method is also disclosed.
