Abstract (en)

[origin: DE10107702A1] The invention relates to a telecommunication device comprising a fastening element for fastening the device on a support, especially a bracelet (1). The telecommunication device is further provided with a housing (2), at least one sensor for detecting a force (or turning moment) that is effective between the housing (2) and the fastening element (1), and a processor (29) for controlling the function of the telecommunication device in accordance with the force detected by the sensor.
