Abstract (en)

The machine for the production of corrugated cardboard comprises: a first corrugating roller (7); a second corrugating roller (9) co-operating with the first corrugating roller for corrugating a sheet of web-like material (N), which passes between said first corrugating roller and said second corrugating roller, which are provided with projections that mesh together; a gluing assembly (31) with a gluing cylinder (41), which co-operates with the first corrugating roller for applying a glue on the crests of said web-like material; and adjustment means for adjusting the position of the gluing cylinder with respect to the first corrugating roller. <??>The adjustment means comprise a detector for detecting a parameter indicating a variation in the speed of rotation of the gluing cylinder. The position of the gluing cylinder (41) is adjusted according to said variation in speed. <IMAGE>
