Abstract (en)
[origin: EP1362740A2] Luminous diodes (2,2') each fit on diode bases (4) for integrating electrical connections and have their optical axes set at a deflecting angle aligned as a right angle to a main beam direction (6) for main reflectors (3) with a partially paraboloid surface. Adjacent reflectors allocated to each luminous diode act as subsidiary reflectors (SR) (3') to allow the diodes to light up SR edges.
