Abstract (en)

[origin: WO02070319A1] In a rail vehicle, a driver's cab (3) is fixed on a support device (2) provided on the front side by means of a holding device (4). In order to avoid mechanical post-treatment in the area between the bottom front sides of the side walls (6) of the driver's cab (3) and the holding device (4) arranged thereunder when the driver's cab is aligned in accordance with the contour of the vehicle, an adjustment gap (15) is produced between the driver's cab and the holding device (4), which is adjusted analogously to the size specifications corresponding to the set position.
