Abstract (en)  
[origin: WO02066764A2] The marking strip (1) has a groove (4) which is disposed at an acute angle to the wall surface; the connector forms a plate, one of the ends thereof having a shoulder with an elastic spring (6) and whose free tip is directed towards the marking strip; the other end (4) of the plate is terminated by a remote flange (7). The spring surfaces (6) of the connector are fitted with hooks in a triangular profile and the connector (4) has at least one compartment (9) for maintaining conduits in a secure position. The marking strip is made of a closed covering, preferably PVC, forming a skeleton profile which is divided by ribs (27) to form chambers (28, 29, 30, 31); the strip has a longitudinal front part (19) which is parallel to the surface of the wall and which forms an outline of a rotated V shape with the shear of the strip, said front part cooperating with the front part (20) of the remote flange of the connector (4).
