Abstract (en)  
[origin: WO02065009A2] A fastener (21) for a pipe or the like, comprising a base (22) and a pipe holder portion (23-26) supported by the base. The pipe holder portion includes a wall (30, 31) defining a recess for receiving a pipe or the like therein, and a resilient holding finger (34) extending obliquely from the vicinity of the end of the wall into the recess. The pipe holder portion is supportedly connected to the base (22) through a hollow tubular cushion portion (41). The end of the wall of the pipe holder portion is connected, through a short sheet-like thin connecting piece (43), to either an adjacent wall of another pipe holder portion or an adjacent wall integrated with the base. The thin connecting piece (43) is formed in a thin plate having the same length as that of the pipe holder portion in the longitudinal direction of the pipe. The thin connecting piece is formed with a slit (45) extending in the longitudinal direction of the pipe.
