Abstract (en)

[origin: WO02070995A1] The invention relates to a sensor (2) for monitoring a thermodynamic parameter of a fluid in an industrial installation (1). The sensor (2) is connected to a measuring chain (4) for collecting and processing an electric signal emitted by the sensor (2). A perturbation of fluid origin is produced that acts on a sensitive element of the sensor (2), thereby altering the electric signal from the sensor (2). Said altered signal from the sensor (2) is collected and analysed using the measuring chain (4).
