Abstract (en)

[origin: WO02067002A1] The invention relates to a method and to a device for testing electronic circuits or the parts thereof on printed circuits. The inventive method comprises the following steps: (a) detecting the radiation that is emitted by the surface of the printed circuit, (b) converting the detected radiation to data that represent a surface structure and/or depth structure of the printed circuit, (c) comparing the data of the surface structure and/or the depth structure with stored data of a desired state of the surface structure and/or depth structure, and (d) determining any deviations between the data of the detected surface structure and/or depth structure and the data of the desired state of the surface structure and/or depth structure.
