Abstract (en)

[origin: WO0241677A2] The invention relates to a cooling device for, in particular, electronic components. Said cooling device comprises a base plate and cooling fins that are anchored inside channels of said base plate. The invention provides that in each case, only one lateral wall (2b) of each channel (2) can be permanently deformed or is permanently deformed, whereas the shape of the other lateral wall (2a) of the respective channel (2) remains essentially unchanged and guarantees the defined position of the cooling fins (3).
