Abstract (en)
There is provided an emulsion dispenser comprising a housing (30) containing a plunger (31), a resilient member (45) having a cavity and an actuator having a dispensing tube (34). The actuator is connected to the top end of said plunger and is for moving the plunger within said housing (30) to compress the resilient member thereby expelling any emulsion contained within said resilient member cavity through the dispensing tube via the plunger (31). The resilient member is formed of a recyclable plastics material. <IMAGE>
