Abstract (en)
[origin: EP1364892A1] The bag body has an opening and an elastic band extending along a circumferential section of the body in the region of the opening. The body (2) of the bag in a compensating section is connected to the band (7) via connecting piece (7b) which is movable on the body at least partially relative to it. The connecting piece is rigidly connected to the bag body on at least one point (3a,3b). The connecting piece is connected to the bag body at the point furthest away from the effective band length.
