Abstract (en)
[origin: US2003214136A1] A slidable closure for a pivoting cover of a storing compartment in a vehicle. The slidable closure comprises an integral one-piece plastic member comprising a closure member and a resiliently deformable spring member. The closure member has a gripping portion, a catch and a flange. The slidable closure when mounted within an opening of the pivoting cover, is slidably guided by the flange slidably engaging one side of the pivoting cover and by the catch and the spring member slidably engaging the other side of the pivoting cover, such that the closure member is slidably displaceable relative to a fixedly supported end of the spring member in a longitudinal direction between opening and closing positions.
