Abstract (en)
The present finding relates to a draught excluding device for doors, comprising a channel-shaped support section bar (12) to be fixed to the base of a door ledge, a mobile member (13) mounted in the channel-shaped section bar and capable of moving upwards and downwards to and fro the floor, at least one seal carried by the mobile member, and means for connecting said mobile member to the support section bar. The mobile member is provided with a pusher (15) and with an abutment member (16) intended to rest against a stop (17) provided into the support section bar, so as to force the mobile member to lower when the pusher (15) engages with the door jamb, characterised in that two stop members (18) are fixed or obtained into a top portion of the support section bar (12) against which the stop (17) alternately abuts according to the door opening side.
