Abstract (en)
[origin: EP1365101A2] The electromagnetic drive has a rotating motor reducer (2) around which is wound and unwound the shutter. The reducer is held inside a winding tube (3). There is an electrical switch (11). The first end (6) of the motor reducer has an electrical connection (13) and mechanical coupling (14) engaged with a connection unit (15) and coupling (16) on one side face of the switching container.
