Abstract (en)
[origin: EP1365265A1] An optical waveguide element that can stably and inexpensively form an optical waveguide of low loss and low stress in a glass material by ion exchange of Ag ions, and to provide a process for producing the same are provided. The invention provides an optical waveguide element comprising a multicomponent glass material, which is Na₂O-B₂O₃-Al₂O₃-SiO₂ glass containing from 5 to 13% by mole of Na₂O, in which an optical waveguide is formed by doping with Ag ions by ion exchange. The composition is preferably SiO₂: 60 to 75% by mole, B₂O₃: 10 to 20% by mole, Al₂O₃: 2 to 10% by mole, Na₂O: 5 to 13% by mole, Li₂O: 0 to 1% by mole, As₂O₃: 0 to 0.5% by mole, and Sb₂O₃: 0 to 0.5% by mole (provided that As₂O₃ + Sb₂O₃: 0.01 to 1% mole).
