Abstract (en)

Accordingly to the teaching of the invention, a covering and mounting means (10) for mounting electronic adjustment controls (11), light emitting diodes (LEDs) (12) and at least one motion detector lens (14, 13), can either be cylindrical or non-cylindrical in shape. In both cases, the mounting means can be disposed in pendant or standing-post arrangement. Furthermore, the mounting means can either be of telescopic or single body design. <??>In the case of a single body design, an exterior covering means (4) is used. The product features carried thereon the mounting means can then be selectively concealed. <??>A preferred embodiment of a telescopic cylindrical covering and mounting means (10a) in pendant arrangement is elaborated. Particularly, one downwardly viewing first motion detector lens (13) and a laterally viewing second PIR motion detector lens (14) are employed. This embodiment can be ceiling-mounted or wall-mounted. <IMAGE>
