Abstract (en)  
[origin: EP1365432A1] The device has a first separation point, a first magnet mechanism and a first slower movement mechanism in series in a main current path from input to output, a second separation point, a resistance and a further slower movement mechanism in series in an auxiliary current path from input to output and a third separation point, a second resistance and a second magnet mechanism in series towards the null conductor or the conductor of another phase. The line and/or equipment protection switch has a first separation point, a first magnet mechanism and a first slower movement mechanism (2) in series in a main current path in the direction from input to output, a second separation point, a resistance and a further slower movement mechanism in series in an auxiliary current path in the direction from input to output and a third separation point, a second resistance and a second magnet mechanism in series in the direction of the null conductor or the conductor of another phase.
