Abstract (en)
[origin: WO02060293A1] The invention relates to a belt lock (100), wherein a housing (18) is pivotally connected to an opening key (10). Locking can be achieved between the housing (18) and opening key (10) by means of a magnetic lock. The lock can only be opened by means of a key magnet. At least one end of a belt is fixed on the belt lock (100) by a belt clamping device (13), whereby the belt is prevented from slipping when the lock is in a closed state. The belt can be clamped, for example, by means of a zigzag shaped belt channel (14).
