Abstract (en)
[origin: WO02070384A1] A conveying unit for conveying flat objects, particularly in a folder, comprises a first and a second endless belt (04, 06) and a roll (07). A conveyor line for the objects extends, on the one hand, between the first endless belt (04) and, on the other hand, a portion of the circumference of the roll (07) and the second endless belt (06). The second endless belt (06) is driven by a drive device (12) that can be regulated independent of the rotational speed.
