Abstract (en)
[origin: WO02060807A1] The invention relates to a closing device for a faucet of a bar installation, comprising a pivotably positioned closing body (14) which is brought into a closing position and can be brought into an opening position for pouring. Said closing device comprises a stop limb (22) protruding in a pouring direction. In order to pivot the closing body (14), said stop limb stops in the pivoting position on a circumferential edge of a container receiving the drink. A compensation weight (20) actuates the closing body (14) in the direction of its closing position.
