Abstract (en)

[origin: WO0248353A2] The invention relates to DNA sequences, which code for an apoptotic signal transduction protein (Bcl-Rambo) or for polypeptides with a domain of a protein of this type (BHNo domains of Bcl-Rambo), to expression vectors, host cells, genetic products of the aforementioned sequences and antibodies against said genetic products. The invention also relates to an expression and isolation method, to compounds that modulate the apoptotic action, to a method for identifying compounds of this type and to the use of said compounds, or the DNA sequences, or genetic products as medicaments.
