Abstract (en)
[origin: WO02065451A1] An advanced floor mat is disclosed. In an embodiment (Fig. 40) of the present invention, the floor mat includes a cleanable portion. The floor mat may also include a water dissipation component, a water absorbing component, a cushioning component, customized graphics, a transparent cleanable portion, a tacky surface on the cleanable portion, an antibacterial composition, an antifungal composition, and a fragrance. The cleanable portion may be erodible and may include a plurality of cleanable reusable layers. If a tacky surface is included in the floor mat, an anti-slip feature may be associated with the tacky surface to help prevent slipping on a possibly wet tacky surface. The tacky surface may be comprised of a material that has an inherent anti-slip capability when wet. Additionally, a sensor system may be included in the floor mat to assist a user in identifying when the floor mat may require cleaning.
