Abstract (en)

[origin: WO02073745A2] The aim of the invention is to be able to simply and thus cost-effectively produce a contact element (1) and to be able to ensure an adequate contacting between a conductor core and the contact element (1). To these ends, the invention provides that the contact element (1) is provided with a simple base body (2) comprising a recess (3) for accommodating a first conductor (L1). When a first conductor (L1) is accommodated inside said recess, an electrically conductive connection is established between the base body (2) and the first conductor (L1) by rupturing the insulation of said conductor.
