Abstract (en)

A device for removably hooking visor (2) to a cap (4) of the type provided, in correspondence of each side end of porthole (22) of the helmet, with a guide-body (5) for the rotation of the visor that engages according to an axis into a hole (23) of the visor. The device also comprises a cursor (7) slidingly associated to the guide-body and provided with means (8) for holding the visor. Cursor (7) translates between an engagement position of the holding means with the visor and a disengagement position. The device is also provided with elastic means (25) to push the holding means to an engagement position with the visor. <IMAGE>
