Abstract (en)  
A roll-up curtain assembly comprises an elongated seat frame (10), designed to be mounted at one lateral side of an entrance of a private area. The seat frame (10) has an elongated opening. A shaft (40) is received in the seat frame (10) for free rotating. A curtain piece (60) is rolled up on the shaft, having one end secured at the shaft. A reverse assembly (50) is provided to return the curtain piece (60) to the rolled up position after it is released from the extended position. The free end of the curtain piece (60) passes through the opening of the seat frame (10). A stopping device (70) is mounted on the free end of the curtain piece (60) for preventing the curtain piece (60) from being pulled into in the seat frame (10). A first join member (81) is mounted on the stopping device (70) and a second join member (82) is to mounted on the other lateral side opposite from the seat frame (10) of the entrance of the private area, to assure closure of the curtain piece (60). <IMAGE>
