Abstract (en)  
A lock for a door structure, comprising a frame (1) arranged to be secured against a first side (13a) of a tubular member (13) of said door structure; at least one bolt (12a) which extends through a first opening (17) provided in this first side (13a) and through a second opening (16) provided in a second side (13b) of the tubular member (13) situated opposite to said first side (13a). For securing the lock against the tubular member (13), this lock comprises an externally screw threaded tubular element (4) which provides a passage through which said bolt (12a) projects out of the frame (1) and which is arranged to project through said first opening (17) into the tubular member (13) and to co-operate by screwing with an internally screw threaded element (5) which is arranged to be slid over the said bolt (12a) through said second opening (16) into the tubular member (13), to secure the lock against said first side (13a) of the tubular member (13). <IMAGE>
