Abstract (en)  
[origin: EP1367199A1] The present invention relates to an automatic lock of the those which act mechanically and which, on closing the door, remain with the bolt (5) or bolts introduced into the frame (4) as well as the latch (6) without the use of the key being needed. By means of a push button (16) on the inside face the opening is achieved both of the latch (6) and of the bolt (6) by a depression of said push button. Likewise the opening is achieved of all the anchoring means from the outside by means of a quarter turn of a key and this lock permits the incorporation of remote mechanisms for opening. <IMAGE>
