Abstract (en)
[origin: WO0242694A1] This invention relates to an electric radiator which can overcome the disadvantage of the prior art which heat area is limited and heat speed is slow and the structure is complicated. The radiator has a reflecting plate and flow deflectors. A part in room space can be heated rapidly by the radiation of the reflecting plate. The temperature in whole room space is increased by vertical convection caused by flow deflectors. This invention has simple and compact structure, lighter weight, and lower cost.
