Abstract (en)
[origin: GB2372031A] A one-piece, injection-molded, openable container for holding one or more vessels, comprises: <SL> (a) a holding section (1) for holding the said one or more vessels; (b) a closure section (2) movable between open and closed positions; and (c) an engagement means (5) for engaging, and so holding in place, the said one or more vessels when the closure section is in the closed position and disengaging, and thus allowing access to, the said one or more vessels when the closure section is in the open position. </SL> The container may provide a kit for a medical or veterinary drug delivery system, the vessels comprising vials or ampules, and securing means may be provided in the closure section (2) for syringes, tubing, swabs, filters, etc.
