Abstract (en)

[origin: WO02070095A1] The invention concerns a stuffed toy or doll wherein the complementary attention-drawing device consists of an animation module (2) comprising an integrated imaging system (3), arranged opposite a transparent display screen (4) provided on the envelope of the toy body. Said imaging system (3) is mounted on a support in the form of a carousel (6) driven in rotation by gear motor means (8) powered by a power source (14), and associated with a control member in the form of a switch (15), enabling the continuous or sequential unwinding of said imaging system (3) opposite said transparent display screen (4). The animation module further comprises an illuminating device (16) designed to illuminate the part of the imaging system (3) arranged opposite the transparent display screen (5), which illuminating device (16) is powered by a power source (14) associated with a control member in the form of a switch (15).
