Abstract (en)
[origin: WO02070243A1] A device is disclosed with the object of providing a device for the production of products made from tissue and/or tissue-like materials with at least two plies, which have adequate adhesion between the individual layers of the two and more ply products. Said device comprises an embossing unit with at least two rollers, one roller being a plain roller (2) and the other an embossing roller (3). Said embossing roller (3) comprises a shaft and at least two segments arranged thereon with embossing elements (5). Said embossing roller is subjected to pressure by means of a bearing unit (7) arranged on the shaft.
