Abstract (en)
[origin: WO02064448A1] Disclosed are a booklet blister package and its manufacturing method, in which a description is seal-attached to the blister package on a side of the lid foil. By the package and method, a user can safely use contents in the package, and the manufacturing cost of the package can be reduced. The method comprises the steps of: putting contents in the blister cavity formed on the base film; sealing a lid foil to the base film in such a manner as that the contents are filled between the base film and the lid foil; supplying a description from a description feeding roll and locating the description on the lid foil; selectively seal-attaching the description onto one edge of blister package on a side of the lid foil; and punching predetermined portions of the blister package sealed description, so as to produce a booklet blister package.
