Abstract (en)  
[origin: WO02062894A1] This invention relates to a coating composition comprising (a) at least one binder and (b) at least one filler having a surface area of at least about 1 m<sup>2</sup>/g and wherein a topcoat derived from the coating composition is printable with a UV curable ink-jet ink. The invention also relates to an article with an ink receptive printing layer, comprising a substrate having a topcoat, wherein the topcoat is printable with UV curable ink-jet inks. The topcoats provide a printable surface for UV curable ink-jet inks. The print shows superior liquid resistance. The print quality of the UV curable inks is improved and a reduction in bleeding of colors occurs.
