Abstract (en)

[origin: WO02066720A2] The invention relates to a patterned fabric with a motif, consisting of warp threads (12) and weft threads (11). The weft threads form a group of threads and form a cell together with at least one warp thread. The weft threads are connected to the warp threads in the cell in such a way that the cell gives a specific colour impression. The cell is composed of bonds, without a repeat, which are formed by at least two warp threads and two weft threads and are irregular in the warp and weft directions. The patterned fabric has the advantage that the fabric motif is an exact reproduction of that of the model.
